“I was created with the hope that one day we would be the best, and well respected civil engineering and surveying firms hard work, honesty, integrity, and the eagerness to please our client. May the legacy live on!.”

VINCE SAMPO

Founder - SAMPO Engineering Inc.

ABOUT US.

We are a company with 20 years in the market, we provide all Surveying, Mapping, Civil Engineering and Planning services for your residential, commercial, public works and Indian reservation projects, both large and small, and we have an excellent working relationship with the local and government agencies of southern California.

We are located in the city of Encinitas, CA.

Sampo Engineering Inc.

It was founded in May 2002 by Civil Engineer Vince Sampo who has over 35 years of experience in the industry and 20 years with the Sampo firm. Later, Sampo was acquired by CE&LST Corporation founded in September 2021 in the City of Encinitas, CA. by Engineer Alan Dennis, Entrepreneurial Engineer with over 38 years of experience with large Civil Engineering projects in Mexico and the United States.

ABOUT US.

➔ MISSION

CELST provides surveying and civil engineering services through all stages of a project; from feasibility studies to final engineering, providing creative and innovative designs with professionalism to arrive at economical and functional designs.

➔ VISION

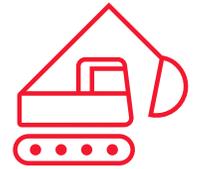

At CELST our goal is to provide the best professional services to stakeholders for whom we strive to make a difference by continuously delivering land surveying and civil engineer designs incorporating the latest technology to everyday tasks.

TECHNOLOGY.

Sampo Engineering uses the latest in technology with Civil 3D software by Autodesk to generate engineering drawings and survey maps. For field surveys, depending on our needs, the Spectra Precision Epoch 50 GPS unit, Leica 1200 Robotic Total Station, or Sokkia Set 3 Total Station with data collection capabilities will be used. Our GPS and robotic systems have the capability to run a one person survey crew for most surveys and all of our data collectors interface with Civil 3D software to minimize error and decrease office time resulting in cost savings to our clients. The robotic total station has the capability of using a laser to obtain survey coordinates and elevations without the use of a prism where accessibility is not possible.
